

Extraction form

This is the data extraction form for the project: "How transparent and verifiable is research about the impact of social media on adolescent mental health?".

** Indicates required question*

1. Coder initials *

Mark only one oval.

☐ IGL

☐ TEH

☐ JB

☐ Other:

2. Article ID *

Copy & paste the article ID number

3. Is the article reported in a peer-reviewed academic journal? *

Mark only one oval.

☐ YES

☐ UNCLEAR

☐ NO

4. Is the article written in English? *

Mark only one oval.

- ☐ YES
- ☐ UNCLEAR
- ☐ NO

OPEN ACCESS

Definitions: "Open access" means that a version of the article can be accessed without going through a paywall (paywalled articles require payment on demand or via subscription).

Instructions: Begin by trying to access the journal's version of record using the DOI and your institutional affiliation. Additionally, try to identify if there is an open access version of the article available. First, look to see if it says "open access" on the article webpage. If not, run a search in [Google Scholar](#) – first, make sure you are using a web browser in private or incognito mode (so you are not logged into your institutional affiliation). Next, search for the article title and check up to the first ten results for a matching article. If you find a match, click "All *n* versions", and check the first ten results to see if any are open access. Ignore any versions that indicate access is via your institutional affiliation (e.g., @Sydney).

5. Can you view an open access version of this article? *

Mark only one oval.

- ☐ Yes
- ☐ No – I can only access the article through a paywall
- ☐ No – I cannot access any version of the article
- ☐ Other:

ARTICLE VERSION

All of the remaining questions in this form should be answered based on the version-of-record where possible. The version-of-record is the article available on the journal's website. If the version of record is unavailable, you can use an alternative open access version.

Please store the version of the article you are coding (preferably a PDF) in . For the filename, enter the article ID followed by an underscore and your initials. For example: "502_TEH.pdf"

6. Which version of the article are you coding? *

Mark only one oval.

- ☐ Journal's version of record
- ☐ An alternative open access version
- ☐ Other: _____

RESEARCH DESIGN

Definitions: "Empirical research" means a study must involve the analysis of quantitative or qualitative data. This includes primary or secondary data analysis, but excludes evidence synthesis (e.g., meta-analysis). Thus, empirical research includes experimental studies, observational studies, or secondary data analyses. Empirical research excludes meta-analyses, systematic reviews, essays, opinion pieces, news, simulations, and theory articles.

7. Does the article report empirical research? *

Mark only one oval.

- ☐ Yes
- ☐ Unclear
- ☐ No

8. What is the research design? (tick all that apply)

Check all that apply.

- ☐ Primary research study
- ☐ Secondary analysis
- ☐ Other: _____

9. What is the data type? (tick all that apply)

Check all that apply.

- ☐ Qualitative data
- ☐ Quantitative data
- ☐ Other: _____

PREREGISTRATION

Definitions: “Preregistration” refers to the public specification of important aspects of the study (typically hypotheses, methods, and/or analysis plan) prior to commencement of the study. A “Registered Report” is a specific article format that involves a study being accepted for publication in principle at a journal before the study begins.

Coder instructions: Aim to find a preregistration statement. Firstly, search the document for the keyword “**regist**” (to cover registration, preregistration, registered, etc). If insufficient information is found during the keyword search, manually examine specific sections where preregistration might be mentioned, e.g., front matter, abstract, methods, results, disclosure statements after the discussion section. If the article is a Registered Report then that exact term should be used.

10. Does the article state whether or not the study (or some aspect of the study) was preregistered? *

Mark only one oval.

- ☐ YES – the statement says that there is a preregistration
- ☐ YES – the study is a Registered Report
- ☐ YES – the statement says that there is no preregistration
- ☐ NO – there is no statement about preregistration *Skip to question 14*
- ☐ Other:

PREREGISTRATION DETAILS

11. Copy and paste the verbatim statement *

12. How is the preregistration accessed? (according to the statement) *

Mark only one oval.

- ☐ Open Science Framework
- ☐ AsPredicted
- ☐ ClinicalTrials.gov
- ☐ Registered Report
- ☐ Other:

13. Can you access and view the preregistration (without contacting anyone)? *

Mark only one oval.

☐ YES

☐ NO

☐ Other:

DATA SHARING

Definitions: “data” refers to recorded information that supports the analyses reported in the article. For our purposes, we use “data” synonymously with “raw” or “primary” data, meaning recorded information at the level of sampling units (e.g., participants, homes, companies, etc). Summary level data does not count for our purposes. A “data availability statement” can be as simple as a URL link to a data file, or as complex as a written explanation as to why data cannot be shared.

Coder instructions: Aim to find a data availability statement or link to data. Firstly, search the document for the keyword “**data**” and then for the keyword “**avail**”. If insufficient information is found during the keyword search, manually examine specific sections where data availability might be mentioned, e.g., front matter, author notes, abstract, methods, results, disclosure statements after the discussion section, and supplementary material.

14. Does the article state whether or not data are available? *

Mark only one oval.

☐ YES – the statement says that the data are available *Skip to question 16*

☐ YES – the statement says that the data are not available
Skip to question 18

☐ UNCLEAR – the statement says that the data may be available but access is restricted *Skip to question 18*

☐ UNCLEAR – the statement says that the data are available on request
Skip to question 18

☐ NO – there is no data availability statement *Skip to question 20*

☐ Other:

15. Copy and paste the verbatim statement (if there is one)

DATA SHARING YES DETAILS

16. How are the data accessed? (according to the statement) *

Mark only one oval.

- ☐ Personal or institution website
- ☐ An online, third-party repository (e.g., OSF, FigShare etc.)
- ☐ Supplementary materials hosted by the journal
- ☐ Within the article (or appendices)
- ☐ From a third party
- ☐ Other:

17. Can you access, download, and view the data (without contacting anyone)? *

Mark only one oval.

- ☐ YES
- ☐ NO
- ☐ Other:

Skip to question 20

DATA SHARING RESTRICTED DETAILS

18. Did the authors provide any reasons for not sharing or restricting access to the data? *

Mark only one oval.

☐ YES

☐ NO

☐ Other:

19. Copy and paste the verbatim reasons (if any)

MATERIALS SHARING

Definitions: “materials” refers to any documents or files needed to run the study, including stimuli, measures (e.g., survey instruments), and computer code/software used for data collection, presentation of stimuli or running experiments. The types of materials that are relevant will vary from study to study; consequently will only check if at least one of the types of materials mentioned above has been shared. Note that we do not consider supplementary data/findings (e.g., additional figures or tables) to be ‘materials’. Also computer code related to analyses does not count as materials; this is addressed separately (next section).

Coder instructions: Aim to find statements or links related to the materials mentioned above. Firstly, search the document for the keyword “material” to see if there is a general materials availability statement (note that a general comment about “supplementary materials” only counts if you can actually find some of the materials mentioned above in the supplementary section). If insufficient information is found during the keyword search, manually examine specific sections where materials might be mentioned, e.g., front matter, author notes, abstract, methods, results, disclosure statements after the discussion section, and supplementary material.

20. Does the article state whether or not any materials are available? *

Mark only one oval.

☐

YES – the statement says that all or some materials are available
Skip to question 22

☐

YES – the statement says that the materials are not available
Skip to question 24

☐

UNCLEAR – the statement says that the materials may be available but access is restricted
Skip to question 24

☐

UNCLEAR – the statement says that the materials are available on request
Skip to question 24

☐

NO – there is no materials availability statement
Skip to question 26

☐

Other:

21. Copy and paste the verbatim statement(s) (if there are any).

MATERIALS SHARING YES DETAILS

22. How are the materials accessed? (according to the statement) *

Mark only one oval.

- ☐ Personal or institution website
- ☐ An online, third-party repository (e.g., OSF, FigShare etc.)
- ☐ Supplementary materials hosted by the journal
- ☐ Within the article (or appendices)
- ☐ From a third party
- ☐ Other:

23. Can you access, download, and view the materials (without contacting anyone)? *

Mark only one oval.

- ☐ YES
- ☐ NO
- ☐ Other:

Skip to question 26

MATERIALS SHARING RESTRICTED DETAILS

24. Did the authors provide any reasons for not sharing or restricting access to the materials? *

Mark only one oval.

- ☐ YES
- ☐ NO
- ☐ Other:

25. Copy and paste the verbatim reasons (if any).

ANALYSIS SCRIPT SHARING

Definition: "Analysis script" refers to specification of data preparation and analysis steps in the form of analysis code (e.g., R), syntax (e.g., from SPSS), or detailed step-by-step instructions for using point-and-click software.

Coder instructions: Aim to find an analysis script availability statement or link to analysis scripts. Firstly, search the document for the keyword **"analysis script"** and then for the keyword **"analysis code"**. If insufficient information is found during the keyword search, manually examine specific sections where analysis scripts might be mentioned, e.g., front matter, author notes, abstract, methods, results, disclosure statements after the discussion section, and supplementary material.

26. Does the article state whether or not analysis scripts are available? *

Mark only one oval.

- ☐ YES – the statement says that the analysis scripts are available
Skip to question 28
- ☐ YES – the statement says that the analysis scripts are not available
Skip to question 30
- ☐ UNCLEAR – the statement says that the analysis scripts are available on request
Skip to question 30
- ☐ UNCLEAR – the statement says that the analysis scripts may be available but access is restricted
Skip to question 30
- ☐ NO – there is no analysis script availability statement
Skip to question 32
- ☐ Other:

27. Copy and paste the verbatim statement (if any).

ANALYSIS SCRIPT SHARING YES DETAILS

28. How is the analysis script accessed? (according to the statement) *

Mark only one oval.

- ☐ Personal or institution website
- ☐ An online, third-party repository (e.g., OSF, FigShare etc.)
- ☐ Supplementary materials hosted by the journal
- ☐ Within the article (or appendices)
- ☐ From a third party
- ☐ Other:

29. Can you access, download, and view the analysis script (without contacting anyone)? *

Mark only one oval.

- ☐ YES
- ☐ NO
- ☐ Other:

Skip to question 32

ANALYSIS SCRIPT SHARING RESTRICTED DETAILS

30. Did the authors provide any reasons for not sharing or restricting access to the analysis scripts? *

Mark only one oval.

☐ YES

☐ NO

☐ Other:

31. Copy and paste the verbatim reasons (if any).

REPORTING GUIDELINES

Definitions: Reporting guidelines are checklists detailing a minimum set of methodological information that should be provided for a particular research design.

Coder instructions: Aim to find mention of a reporting guideline. Firstly, search the document for the keyword "guide" (guideline, reporting guideline). Secondly, search for the keyword "check" (checklist, check-list). If insufficient, search for particular guidelines depending on the research design:

Experimental studies: CONSORT, SPIRIT

Observational studies: STROBE

Qualitative studies: COREQ, SRQR

If insufficient information is found during the keyword search, manually examine specific sections where reporting guidelines might be mentioned, e.g., methods sections or, disclosure statements after the discussion section.

32. Is there a statement declaring the use of one or more reporting guidelines? *

Mark only one oval.

- ☐ YES – the statement discloses use of at least one reporting guideline
- ☐ NO – there is no statement related to reporting guidelines
- ☐ Other: _____

33. Copy and paste the reporting guideline statement verbatim (if any)

34. Which guidelines were used (if any)? (select all that apply and use the other option if necessary)

Check all that apply.

- ☐ CONSORT
- ☐ SPIRIT
- ☐ STROBE
- ☐ COREQ
- ☐ SRQR
- ☐ Other: _____

FUNDING DISCLOSURE

Definition: “Funding” refers to any financial support related to the study or the researcher running the study.

Coder instructions: Aim to find a funding disclosure statement. Firstly, search the document for the keyword “**fund**” (to cover funder, funding, etc). If insufficient information is found during the keyword search, manually examine specific sections where funding statements might be mentioned, e.g., front matter, author notes, abstract, methods, results, disclosure statements after the discussion section, and supplementary material.

35. Does the article include a statement indicating whether there were funding sources? *

Mark only one oval.

- ☐ YES – the statement discloses at least one source of funding
- ☐ YES – the statement says that there was no relevant funding
- ☐ NO – there is no funding statement *Skip to question 37*
- ☐ Other: _____

FUNDING DISCLOSURE DETAILS

36. Copy and paste the verbatim statement. *

CONFLICT OF INTEREST DISCLOSURE

Definition: “Conflicts of interest” or “competing interest” refers to self-serving factors (usually financial) that could potentially influence a researcher’s conduct or decision-making.

Coder instructions: Aim to find a conflict of interest or competing interest disclosure statement. Firstly, search the document for the keyword “**conflict**” and then search for the keyword “**competing**”. If insufficient information is found during the keyword search, manually examine specific sections where conflict of interest statements might be mentioned, e.g., front matter, author notes, abstract, methods, results, disclosure statements after the discussion section, and supplementary material.

37. Does the article include a statement indicating whether there were any conflicts ^{*} of interest?

Mark only one oval.

- ☐ YES – the statement discloses at least one conflict of interest
- ☐ YES – the statement says that there were no conflicts of interest
- ☐ NO – there is no conflict of interest statement *Skip to question 39*
- ☐ Other:

CONFLICT OF INTEREST DISCLOSURE DETAILS

38. Copy and paste the verbatim statement. ^{*}

Anything interesting or problematic to note?

39. You can use this space to record anything interesting or problematic about this article
